At the Crossroads: A Portrait of 8 New York City Blocks and One Man

Along the western edge of the Lower East Side, bound by Chrystie and Forsyth Streets, there currently stands a seven block stretch of open park space. In the very heart of that park, between Delancey and Rivington Streets, a lush community garden, surrounded by a fence, rises up from the brick and cement. And on most fair-weather days, beside the gate sits an older African American man whose watchful, knowing eyes look out from under the visor of a Yankees baseball cap. The name of the park is Sara Delano Roosevelt, the name of the garden is M’Finda Kalunga, and the name of the man is Robert Humber - though he is known far and wide as Bob. Bob’s roots as a community activist stretch back nearly 50 years. Indeed, he was the catalyst for both creating M’Finda Kalunga Garden and transforming Sara D. Roosevelt Park into a safe space for the community. From the garden gate, Bob spends his time catching up with friends, making preparations to attend community meetings, offering food and clothes to the homeless people of the Lower East Side, and listening to (and sharing) ongoing concerns about the Park.

Reform: From Tenements to Parks

Though no trace of what came before remains, in the decades prior to Bob’s time, the land between Chrystie and Forsyth Streets was crowded with old tenement houses. The southernmost block between Canal, Bayard, Chrystie, and Forsyth Streets enjoyed a brief moment in the limelight when it was spotlighted in the 1900 Tenement Exhibition. As part of an effort to bring attention to the need for tenement building reforms, a three-dimensional model of this block was fabricated and displayed in an uptown exhibit, along with grim statistics about sanitary concerns and antiquated living conditions. The great advocate for tenement reform, Jacob Riis, remarked “In its gloom and its crowds, it is typical of all the rest on that East Side, where the population is jammed as nowhere else in the world.” The purpose of the Tenement House Exhibition was to inspire change and improve the lives of New York City residents, and in this, it was successful. In 1901 New York City passed the Tenement House Act, which not only established standards for new housing, but also created a minimum standard of living for all older apartment houses. This meant landlords of Pre- and Old-Law tenements were mandated by law to upgrade their properties, offering increased access to air, light and running water. While landlords broadly resented and bitterly contested this law, after 1905, they had little choice but to capitulate, and so life improved, albeit marginally, for renters across New York City. (Ironically, whatever reforms were made to the tenements featured in the Tenement House Exhibition model were short-lived - the entire block was razed as a consequence of completing the Manhattan Bridge.)

Reforms aside, the old tenement houses of the Lower East Side seemed to be frozen in time as new building projects and technology continued at a steady pace around them. Moreover, the restrictive changes in immigration law that culminated with the passage of the National Origins Act in 1924 transformed this once densely crowded section of the city into an area of widespread vacancy. Landlords struggled to maintain their aged tenement properties with fewer newcomers to rent them to. City planners began to see the depopulating Lower East Side as an opportune place for large-scale urban renewal projects.
Oddly enough, the sprawling field of rubble stretching north to Houston from Canal represented a brighter future for housing on the Lower East Side (perhaps excluding the people who were forced to move). As optimistic as people were at the outset of this model housing project, their enthusiasm dimmed with each of the many delays and bureaucratic hurdles. Ultimately, the timing of the project could not have been worse, since it coincided with the stock market crash of 1929. By December 1930, as the nation plunged into Depression, 200 tenement houses were razed, displacing upwards of 4000 people. The area of 'excess condemnation' from which the model homes were supposed to rise was leveled off, paved over, and remained thus for over two years.

For a brief moment, in spring of 1932, new life was breathed into the promised model homes. The Department of Commerce announced that the architectural firm of Howe and Lescaze’s model housing plan was approved for construction. Across New York City, imaginations were inspired by the designs for the proposed 24 buildings. Such amenities as elevator access and roof terraces (“to be available for recreation as well as for hanging out wash”) seemed like a dream to people accustomed to walk-ups. Most radical of all, the buildings were held aloft from the ground level by 14-foot pillars allowing for play and leisure space during inclement weather. The proposal offered “a brighter outlook on life and a cheerful environment for a new community of about 8,000 persons,” available for a monthly rent of $10.95 per room.

Despite the collective desire to see this dream housing become a reality, the seven blocks remained dormant for another two years until February of 1934, when a newly elected Mayor Fiorello LaGuardia officially put an end to the project. Blaming the corruption of the previous administration for the City’s failure to erect model housing, LaGuardia went further to claim that the land itself was ‘unsuitable’ for such a project. He proposed, instead, a park and playground, and appointed Parks Commissioner, Robert Moses, to oversee the project. People who had lost all hope of the model

With the goal of expediting traffic between the Manhattan and Williamsburg Bridges, planners targeted the seven remaining blocks bounded by Chrystie, Forsyth, Canal and Houston. Their plans involved widening both Chrystie and Forsyth Streets, and required the demolition of every building across these seven blocks. What remained, labeled “excess condemnation,” was set aside for an ambitious model housing development.
housing project enthusiastically embraced the plans for a park on the Lower East Side. The only opposition came from Borough President Samuel Levy, who argued against closing east-west cross streets. Moses proceeded to implement his plan, dismissing Levy’s objection asserting that, “You can’t have a decent park or playground with a cross street running through it every 200 feet.”

On September 12, 1934, the Department of Parks held an opening ceremony for the park, despite it being only two-thirds completed. Mayor LaGuardia delivered an address and dedicated the park to Sara D. Roosevelt, president Franklin D. Roosevelt’s mother. The finished park represented both a sense of closure and a hopeful new beginning for the Lower East Side. Initially, there was great enthusiasm for the park. The local Settlement Houses took advantage of it for their summer programs, and local clubs scheduled parties, plays, musical performances and gatherings. For a period there was a feeling of rebirth on the Lower East Side—especially for the children who had limited access to safe park spaces for play.

**Revolution: Decline and Rebirth**

Over the next three decades, the combination of deindustrialization, disinvestment, and fiscal crisis contributed to the decline of Sara D. Roosevelt Park. By the mid 1960s, “SDR” Park became synonymous with poverty and homelessness, vandalism, gang violence, and drug and sex trafficking. It was during this period that Bob moved to the Lower East Side. Like the Park he now protects, Bob’s story has deep roots; in early 2020, he shared that story with the Museum.

Robert Humber was born in Georgia, USA, on June 12, 1936, to a Panamanian father and Georgia-born mother. Like many African Americans living in the South during this period, Bob’s father set his sights on moving to a northern city. He had a
brother who had migrated north earlier to start up a pressing business, and that connection drew him to New York City. When Bob was six years old, the rest of his family moved north and settled in the Bronx. Bob’s recollection of his early time in the City revolves around the environment and play.

I remember piles of snow. And we used to throw snowballs and stuff when I was six years old. And I remember they used to use a lot of charcoal! Charcoal! It was a lot of charcoal that we used to use. I was famous for running. I was one of the fastest runners in New York City. And my brother - his gift was, he used to jump over cars." 3

Because he spent the majority of his school and adolescent years uptown, Bob asserts, “I’m a Bronx boy!” Growing up in the Bronx and later working in Harlem, Bob’s path crossed major historical figures of the era. He met Dr. Martin Luther King Jr., John Coltrane, Thelonious Monk, Maxine Sullivan and the “jazz people” who gathered around Freddie’s. Bob also recalled meeting Malcom X:

I didn’t have a chance to really talk to Malcom. My mother sent me to my Aunt’s house to get some something from her. And I didn’t know it was butter in there or something or whatever. It was summertime. And Malcom was speaking. And I’d heard about the man, but I didn’t really know that much about him. So I listened to him, and I got home late. I got home late. And when I got home, my Father said, “Where have you been? Go in the room.” [laughs] Yeah. So, ah... Malcom made an impression on me. [laughs]

Despite the humor Bob brings to the telling of this tale, there is a serious edge to it that would later manifest in Bob’s radical efforts to reclaim SDR Park.

These interactions with cultural leaders influenced Bob, but his family gave him even deeper foundations for a life in activism and service. Another memory from Bob’s childhood involved coming home to a house full of neighborhood kids. “My mother was always involved with kids,” he recalled, and as if following in her footsteps, when it came time for Bob to choose a career, he invested in social work focusing on children. Later in life, at the funeral of an aunt, he made the discovery that seven members of his extended family were also active social workers. “So it’s a thing in my whole family... I guess this was just in my blood.”

Bob began working with children in Harlem and later accepted a position with the Children’s Aid Society as a Special Education Teacher, responsible for boys’ programming downtown. This brought him to the Lower East Side, where he organized basketball games and trips to sporting and cultural events, led classes, and worked with individual children. In the process, he built lasting relationships with families and members of the Lower East Side community and became a surrogate father (and later grandfather) to hundreds of kids from the neighborhood.

Nearly every aspect of this work traced back to SDR Park. Initially, Bob could not deny how degraded the seven blocks of park space had become. The following excerpts from his oral history reveal both his observations and his tactics for reclaiming the park.
“It used to be a mess.

There used to be a dumping ground where they'd bring in mattresses and refrigerators and stoves and just dump them in the park. Everything - just dump it here. It was a dumping ground.

I took an interest in this park because I would meet the kids over here. And it was a rundown park at the time. It was drug-infested, and I started a group called DFZ - Drug Free Zone. And I would put up banners, and wherever that banner was at, the kids would play in that area. And the drug dealers knew not to mess with that area.

Matter of fact, one guy told me, he says, “You are the only guy I know that the gangs respect you. All the gangs.” I said, “Yeah!”

It was really quite a time. I could remember taking kids to ball games, and some of the drug dealers, I'd say, “Hey, I need some money! [laughs] I'm serious!” Two or three hundred dollars they give me. Because they knew I was going to spend it on the kids. We'd go to ballgames and I had money to pay for hotdogs and everything else from them. The thing was - the connection was - I didn't want them selling in here in the park. And once I made the connection with the big guys, their little workers didn't want to be known for messing up my program here with the kids. So that worked. It worked out very well.

And we um, we formed a good relationship with the precinct. I used to go to all their meetings... I was very interested in what was going on... Of course at the time, the kids were turning away from the police. Because this is going back to the time before King got killed... kids didn't trust the police. So I was like a buffer between them. I was letting them know there were some good police officers. And they became friends with them. I had police
officers who used to come after work or before work and hang out with the kids. They would help them with their homework.

My method- it's so different. And I wouldn't advise anyone else to try to do the things that I do, because I've done this so many years... A guy had a gun at, at my head one time. He said, "You're crazy, aren't you." He said, "You know I could kill you right now?" I said "Sure you could." I said, "That's the object of you having a gun there." And he said, "You're nuts. Later."

Bob's understanding of neighborhood power dynamics was acute. Everyone from the community - be they pregnant mothers, local activists, Parks officers, artists, dealers and users of drugs, police, homeless people, punk teenagers, hippies - was enlisted to help Bob reclaim the park for the children. Putting the kids at the center of the issue enabled him to build a radical coalition of unlikely players. The lasting outcome of Bob's method challenges and complicates popular narratives that vilify drug dealers and users, dehumanize the homeless and sex workers, and position the police in aggressive oppositional 'relationships to people of color. In summarizing his position in the community, Bob declared with a chuckle, "I became a forceful man, without any power." Arguably, Bob established himself as a leader with tremendous power, though none of that power was officially granted. For instance, Bob didn't have the official power to close streets for children to play, but that didn't stop him from blocking off Forsyth Street between Delancey and Rivington, and standing his ground against the police when they attempted to shut him down. Oddly enough, a moment of powerlessness stands out as a turning point for Bob in his relationship with the park.

“I was on the basketball court right there. And I had a bunch of kids with me down there. At that time, I played a lot of basketball. And I knew every inch of the court, because part of it was sand, and we used to run people into the sand. You kind of [makes the gesture of pushing someone aside by the shoulder]. That was part of our little thing. This guy came in with a gun. He was shooting like crazy. One of the bullets hit the pole, and you hear ‘peew!’

I hit the ground. And I got up. I was so angry. The guy had left and I was so angry. And I said, "We got to do something". I said "Tomorrow I’m coming out here and I’m bringing my dogs and I’m going to clean up this [lowering his voice] fucking park. And I came down the next day, and I got the police involved, and I told them, I said "This has got to stop." I said "The kids - somebody could have really got hurt. That bullet could have come - you know, it hit the pole and could have killed anybody."

That was a turning point. Right there was the turning point.
After this moment, Bob, along with his Dobermans Oyan, Kenyatta, Kendu, and Bo, mobilized the entire community to restore the park block by block. The nucleus of his effort was the block bound between Delancey and Rivington - the area known today as M’Finda Kalunga Garden. Bob started this project without knowing much about gardening. He committed himself to learning from a team of gardeners, people from the community who shared a passion to make SDR a safe park for the neighborhood.

I used to have barbecues and stuff in here. I took over this area. There was nothing in here. I used to bring my dogs in here and let them run around.

I took over this garden, and a lady named Thelma - she’s still around - she helped me. She did a lot of work. Didn’t know one plant from the other, you know. I came in with a lady who was going to give us some donations - Jim Pender and I. And she was giving me all these Greek terms and all, you know. And I said, “Oh that would be nice, that’ll be nice” [laughs]

I wanted a garden for the kids to come and learn, not just play. I want them to know that they could go to other parks, but this is THEIR park.”

Bob’s own education grew beyond a knowledge of plants and gardening. The land itself became of interest to him, and through this Bob learned that the site of the park was also a burial ground. In 1794, after the city’s first African Burial Ground was closed, the African Society petitioned the City to allot them a place to continue to bury their dead. “The free People of color” of this group, with the support of Trinity Church, raised funds to purchase a 50- by 200-foot plot of land on the west side of First Street (Chrsystie Street today) between Stanton and Rivington. The cemetery was opened in 1795 and remained in use until 1853, when burials were banned in Manhattan. It is nearly impossible to know how many African Americans were buried in the Chrsystie Street Cemetery. The allotted space could accommodate 1,950 graves, though vault clearing practices common at the time suggest there may have been a great deal more. Within a year after the cemetery was closed, the site was divided, sold and developed. The buried were exhumed and reinterred at Cypress Hills Cemetery, and life went on downtown without any place to memorialize the African Americans who lived and died in New York City during these early years.

Bob said, “I knew about it. I always wanted to represent it in some way.” With the garden now a focal point of his park efforts, and its location being only half a block away from the original site of the Chrsystie St. Cemetery, Bob had the representative space he’d been seeking. Bob’s next objective was selecting an appropriate name.
"We did some investigating, and we got this guy from Long Island University, I believe it was. And he gave us several names, and we picked. We picked this one, because it meant ‘Garden at the Edge of the Earth,’ and at that time it seemed like the edge of the earth. This garden really felt...it was different. And each year I try to add something different. I brought in different people. I wanted a garden that would be for EVERYONE- not just for people with money."

The name M’Finda Kalunga comes from the Kikongo language, a Bantu-based language spoken across a region of Africa encompassing southern part of the Republic of Congo, the southwestern part of the Democratic Republic of Congo, and the northern part of Angola. A large percentage of the enslaved people brought to America originated from this region. This added layer of historic context deepens the commemorative power of the garden. In 1982, when the name was chosen, the garden represented the resilient and restorative power of the community; and as a commemoration, M’Finda Kalunga Garden not only represented the second African American burial ground, but the lives of the men and women who were brought to New York City during the period of chattel slavery in the United States.

At the very intersection that Robert Moses fought to have closed in 1934, M’Finda Kalunga Garden thrives, inspires and grows more vibrant with each passing year. Surrounded by plants and flowers (roses being Bob’s favorite despite his allergy to them), the many garden benches offer a place to sit and reflect over the long and contentious history of what is today known as Sara D. Roosevelt Park. The results of Bob’s groundbreaking work obscure the decades of decline and unrest just as the new housing developments continue to erase the physical traces of Lower East Side history. All of this change and progress has one particularly curious manifestation: Bob himself was priced out of the Lower East Side about fifteen years ago. In this respect, he has become a part of the single most continuous historic narrative for this tract of land: displacement. Bob moved uptown to East 94th Street, yet he continues his work on the Lower East Side. Each day Bob makes the commute downtown to tend the garden (except for the roses) and offer aid the homeless. Despite his
“Yes, there’s always a different issue come up. For instance, it used to be heroin was king of Sara D. Roosevelt Park, then it came to be crack. And they keep pushing these drugs out here. And the poor... innocent people are thrown into these traps. [But] I’m excited about the future of the park. I think that what I’ve done, I’ve worked with the younger generation and as they get older, they respect what I’m doing. And they’ll respect this park more. This is a great park.”
